**Armenian Medical World Congress
July 3 - 7, 2013
Loews Hotel, Hollywood, California**

Dear Colleagues and Friends,

We are now one month away from the 11th Armenian Medical World Congress (AMWC) and on the behalf of the Armenian American Medical Society and the AMWC Organizing Committee, I am proud to report that we have an exceptional program that has been organized for you.

The Congress organizing committee carefully studied the medical conditions that are the top causes of mortality in the United States, Armenia and Worldwide, according to the World Health Organization and the Centers for Disease Control. Accordingly, a panel of experts have been invited to deliver lectures on the latest advances in medicine and science. Topics covered in the plenary program include cardiovascular disease, stroke, oncology, infectious diseases and familial Mediterranean fever. The Congress will also highlight many innovations that are revolutionizing medicine and healthcare today, including advances in regenerative medicine, targeted therapies, genetics and mobile technologies.

In addition to an impressive plenary program, we have organized concurrent breakout sessions which include more than 170 lectures of various disciplines in medicine, dentistry, pharmacy, nursing, mental health and other allied fields of health. These sessions have been organized with careful attention to assure that the diverse interests and educational needs of our attendees are met.

We have also organized lectures and discussions on health care policy and medical education in Armenia. These series of lectures are designed to examine potential avenues of enhanced collaboration and cooperation between Armenian and Diasporan efforts to improve health and medical education in both Armenia and the Diaspora.

For the first time in the history of the AMWC, 20 continuing medical education (CME) units, 9 continuing dental education (CDE) units and 6 continuing nursing education (CNE) units will be offered to eligible attendees.

In addition to the scientific program, our social committee has organized a series of spectacular events with the goal of setting an atmosphere for

networking, meeting old colleagues, making new friends and having a great time. We have also planned a special alumni reception for registered participants who are graduates of the American University of Beirut and for graduates of Yerevan State Medical University.

Please visit www.aamsc.com/congress for the latest on the congress and the scientific program as well as information on the social activities.

We encourage all of you to attend.

See you in July !!!

Regards,

Vicken Sepilian, MD, FACOG
President, Armenian American Medical Society
Chairman, 11th Armenian Medical World Congress
